Pre-condition	User must be already logged in
Actors involved	User (admin or customer)
Scenario 1	User presses log out button
Description	1: User logs out 2: System goes to main login interface
Post-condition	User taken to main login interface, will be prompted to sign in again.

Name	Browse Products
Description	Interface that displays a list of products
Pre-condition	User must be signed in
Actors involved	User (admin or customer)
Scenario 1	Searching for product
Description	1: User logs in 2: interface displays a list of products 3: The system optionally performs "Search product" use case allowing the user to search for specific products using a search bar
Post-condition	Filter list of products depending on searched result
Scenario 2	Searching product
Description	1: User searches for product 2: A list of product's names that contains the string the user searched for will be listed
Post-condition	Filter list of products depending on searched result

Name	View Basket
Description	Interface that displays the user's basket
Pre-condition	User type must be customer
Actors involved	Customer
Scenario 1	User view's their basket
Description	1: Customer logs in 2: Customer selects view basket 3: The system can optionally perform "Remove product from basket" use case for products in the basket 4: The system can optionally perform the "Purchase" use case which allows the user to purchase all the items. The system will then update the user's balance 5: The system can optionally perform "Change quantity of a product" use case
Post-condition	
Scenario 2	Remove product from basket use case
Description	1: Customer selects a product in the basket to be removed 2: System updates the Customer's basket and database 3: System updates the basket total cost
Post-condition	Filter list of products depending on searched result
Scenario 3	Purchase use case
Description	1: Customer selects buy now 2: System subtracts basket's total cost from customer's balance 3: System records user's transaction
Post-condition	Database updated
Scenario 3	Change quantity of a product use case
Description	1: Customer changes quantity of a product in basket 2: System updates the changes to the database
Post-condition	Database updated

Name	View Wishlist
Description	Interface that displays the user's Wishlist
Pre-condition	User type must be customer
Actors involved	Customer
Scenario 1	User view's their Wishlist
Description	1: Customer logs in 2: Customer selects view Wishlist 3: The system can optionally perform "Remove product from Wishlist" use case for products in the Wishlist
Post-condition	User able to view the list of products in their basket and remove items from it.
Scenario 2	Remove a product from Wishlist use case
Description	1: Customer selects a product in the Wishlist to be removed 2: System updates the Wishlist and database
Post-condition	Database updated

Name	Register a product
Description	Allows a user to sell a product to be sold
Pre-condition	User type must be customer
Actors involved	Customer
Scenario 1	User adds new product
Description	1: Customer logs in 2: Customer selects add new product 3: Customer fills in all the fields 4: The system validates the fields 5: Product added to nonverified product data table to be reviewed by admin
Post-condition	Product added to database. The product is needed to be verified by an admin.
Scenario 2	User adds new product with incorrect details
Description	1: The system fails to validate fields 2: Customer's balance is updated
Post-condition	Product not added to the database, Customer is prompted to reenter the details
Name	Add Money to balance
Description	Allows a user to add money to their account
Pre-condition	User type must be customer
Actors involved	Customer
Scenario 1	User adds money into their account
Description	1: Customer logs in 2: Customer selects add money 3: Customer fills in their details 4: The system validates fields 5: Customer's balance is updated
Post-condition	Customer's balance gets updated.
Scenario 2	User adds incorrect details into their account
Description	1: System fails to validate fields 5: Customer is prompted to re-enter correct details
Post-condition	Customer's balance remains the same, Customer is promoted to re-enter correct details

Name	Account details
Description	Allows Customer to view or edit their account details
Pre-condition	User type must be customer
Actors involved	Customer
Scenario 1	Customer reviews their account details
Description	1: Customer logs in 2: Customer selects Account details 3: The system can optionally perform "Edit details" use case
Post-condition	Account details loaded
Scenario 2	Edit details use case
Description	1: Customer updates fields 2: System validates fields 3: details updated
Post-condition	Database updated

Name	Select a product (for customer)
Description	When a Customer selects a product
Pre-condition	User type must be customer
Actors involved	Customer
Scenario 1	Customer reviews their account details
Description	1: Customer logs in 2: Customer selects a product 3: The system can optionally perform "Add product to basket" use case 4: The system can optionally perform "Add product to Wishlist" use case 5: The system can optionally perform "Add Review" use case
Post-condition	
Scenario 2	Add product to basket use case
Description	1: Customer selects add product to basket 2: System will add product into the basket
Post-condition	Database updated
Scenario 3	Add product to Wishlist use case
Description	1: Customer selects add product to Wishlist 2: System will add product into the Wishlist
Post-condition	Database updated
Scenario 4	Add Review use case
Description	1: Customer selects add review to product 2: Customer enters rating and comments 3: System adds the review to the product 4: Customer can later edit or remove the review
Post-condition	Database updated

Name	Select a product (for Administrator)
Description	When an Administrator selects a product
Pre-condition	User type must be Administrator
Actors involved	Administrator
Scenario 1	Customer reviews their account details
Description	1: Admin logs in 2: Admin selects a product 3: The system can optionally perform "Remove a product" use case 4: The system can optionally perform "Verify a product" use case. This will verify a product that has yet to be verified.
Post-condition	
Scenario 2	Remove a product use case
Description	1: Admin selects a product to be removed 2: System will remove the product from the database
Post-condition	Database updated
Scenario 3	Verify a product use case
Description	1: Admin selects a product to be verified 2: System will acknowledge the product as verified
Post-condition	Product will be moved to verified product data table

Name	Browse Users
Description	Administrator can browse a list of users
Pre-condition	User type must be Administrator
Actors involved	Administrator
Scenario 1	Customer reviews their account details
Description	1: Admin logs in 2: The system can optionally allow the user to perform the use case "Search user" 3: The system can optionally perform "Ban user" use case, once the user has selected a user 4: The system can optionally perform "Unban user" use case, once the user has selected a user 5: The system can optionally perform "Delete user" use case, once the user has selected a user
Post-condition	
Scenario 2	Ban user use case
Description	1: Admin can select a user to be banned 2: System will mark the customer as banned 3: The customer will no longer be able to log in
Post-condition	Database updated
Scenario 3	Unban user use case
Description	1: Admin can select a user to be unbanned 2: System will unmark the customer as banned 3: The customer will be able to log in again
Post-condition	Database updated
Scenario 4	Delete user use case
Description	1: Admin can delete the selected user 2: The system will remove the user from the database
Post-condition	Database updated
Scenario 5	Search user use case
Description	1: Admin can search for a user 2: The system will filter the list of customers by checking if customer's username contains the searched string
Post-condition	Database updated
